

## Question / Answer

### Is it possible to restore salt damaged terracotta pool tiles ?

I'm not sure that damage is the correct terminology. Efflorescence occurs with stone and terracotta, and the issue can normally be resolved. As a member of Infotile you can access our growing archive of close to 200 articles on various topics which include installation and maintenance issues.

Check under 'Sealing and Maintenance' (Stone archive) for Colin Cass' article on managing efflorescence, hopefully it will address your problem. Story title "Avoiding efflorescence....." see last page of article for removing efflorescence.
